

NAME

spybrowse – interactive viewer launcher

SYNOPSIS

spybrowse

DESCRIPTION

A browser program for interactively loading images from the current directory into spyview and spyview3d.

The pattern field supports standard shell wildcards and pattern matching (see `fl_filename_match` in `fltk` documentation.)

Clicking on an already selected item will load it into spyview.

SEE ALSO

spyview3d(1), **spyview(1)**

AUTHOR

This manual page was written by Gary Steele <gsteele@electron.mit.edu>, for the Debian project (but may be used by others).
